Sustainable working
and living

Post-COVID19 Workplace Design

CRAFTWAND® and the Future of the Workplace

The working environments of the future must be reinvented.

The planning paradigms of the past were determined by spatial density and the associated costs, moving forward they must be based on the ability to easily adapt to possible economic and health problems.

The reinvented office must be designed with an even greater commitment to staff well-being, and the implementation of flexible furniture systems will now play an integral part of the 'new workplace'.

Flexibility will allow employees to easily move away from others when needed, as well as allowing companies the opportunity to increase density in the future when virus transmission is less of a concern.

So how will CRAFTWAND® help? Firstly, as a system consisting of solid beech wood modules it's a natural and sustainable product. With the environment being at the forefront of everyone's minds it is important that products with longevity and versatility are available. The modules are renewable, non-toxic and 100% bio-degradable and unlike many other non renewable materials, wood sourced from well managed forestry operations is limitless.

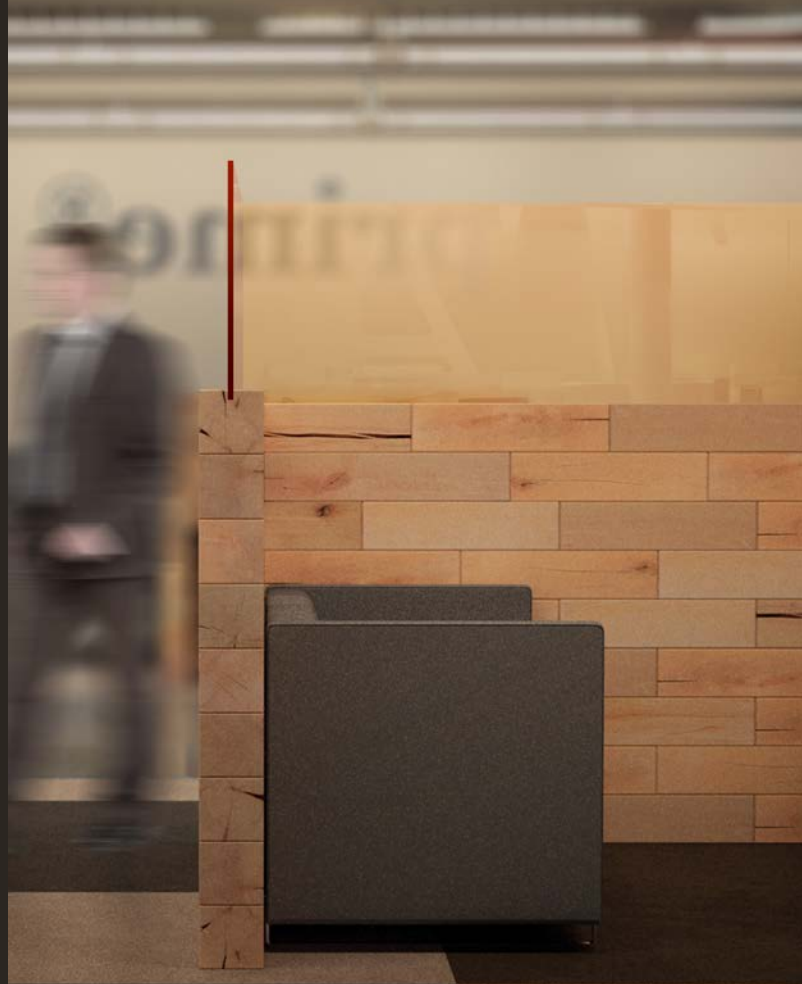

With much more focus now on sustainable buildings and lifestyle, wood is the emerging material.

Secondly, CRAFTWAND® can be adapted to every workplace layout. It creates optical and acoustical privacy, whilst still allowing access to daylight and views. The modular nature of the system, as well as its aesthetic properties, can transform an unappealing workplace into a visually stimulating and inviting setting.

CRAFTWAND® can be used to create:

- Partition walls
- Space dividers
- Office pods
- Privacy screens
- Desks
- Reception areas
- Tables

Lastly, CRAFTWAND® is a free-standing system that is easy to construct and dismantle. An inbuilt interlocking solution means it can be re-assembled in another location without any mess or waste. The design process is simple and the wood modules are available in a variety of sizes and finishes. CRAFTWAND® isn't an 'off the shelf product', so there are no limitations on dimensions and specifications.
